## **IIA LEARNING MANAGEMENT INSTITUTE HOMELAND SECURITY TRAINING FOR THE NEXT GENERATION**

### **WHO WE ARE**

The IIA Learning Management Institute (LMI) is a provider of leading-edge homeland security training. Our catalog of more than 200 courses is based on the extensive work of Edward Badolato, an international homeland security thought leader, and the combined knowledge of LMI's accomplished subject matter experts.

### **RELEVANT AND SUBSTANTIAL CONTENT**

Since 1989, the LMI team has developed and conducted numerous security management and operational training programs in the U.S. and abroad. Our courses cover a full spectrum of topics in the homeland security field, including:

- Energy security  
(oil, gas, power, coal, nuclear)
- Transportation security  
(maritime, truck, rail, air, pipelines, intermodal)
- Chemicals and hazardous materials  
(plant security, transportation, supply chain)
- Defense industrial base  
(security vulnerability assessments, exercises)

This coursework is contained in literally hundreds of CDs, PowerPoint presentations, Webinars, lectures, published articles, case studies, and white papers—all of which are now being used to ensure that the delivery of our training is more effective and less expensive than traditional methods.

### **ELECTRONIC DELIVERY**

In addition to classroom training, the IIA Learning Management Institute is adapting its courses to a Web-based format to include interactive material, Webinars, and podcasts. Our proprietary learning management system will allow for learner registration, delivery of coursework, and learner assessment through an online environment. The LMI training program will provide you with tools such as competency management, skills analysis, succession planning, certifications, and resource allocation (venues, rooms, textbooks, instructors, and related materials).

We are excited to introduce LMI's unique training capabilities. Our goal is to set the industry standard for homeland security training by providing your organization with relevant and substantial content using state-of-the-art electronic delivery methods.
